Isaac Ikape

FRONTEND ENGINEER | REACT, NEXT.JS & REACT NATIVE

ikapeisaac3@gmail.com +2347036503218 github.com/ikape linkedin.com/in/ikape Lagos, Nigeria

PROFILE

Frontend-focused Software Engineer with 4+ years of hands-on experience building and maintaining web and mobile applications across payments, fintech, booking platforms and business dashboards. I mainly work with React, TypeScript, Next.js and React Native, and I'm comfortable taking features from understanding requirements through development, API integration, testing and release. I also handle state management, reusable components, production debugging and code reviews, while working closely with product, design and backend teams to deliver features and keep applications running smoothly.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React (web), Next.js, React Native (mobile), HTML5, CSS3, reusable components, Redux, Context API, CSR/SSR

UI & Accessibility: Responsive interfaces, accessibility, Tailwind CSS, shadcn/ui, interactive interfaces, CSS animations

Performance & Reliability: Frontend performance optimization, production debugging, Sentry monitoring, error handling

Testing: Jest, Cypress, Playwright, unit, integration and end-to-end testing

APIs & Integration: REST APIs, frontend–backend integration, API debugging, authentication and payment workflows

Backend & Cloud: Node.js, Express.js, NestJS, PostgreSQL, MongoDB, Firebase, AWS, Swagger, Postman

Tools & Practices: Git, GitHub Actions, CI/CD, Docker, Vercel, Netlify, code reviews, Agile/Scrum

PROFESSIONAL EXPERIENCE

Valuepay Payment Solutions / Valuepay Microfinance Bank 05/2025 – Present | Abuja, Nigeria
Software Engineer (Full-time)

- Work across Valuepay Payment Solutions (PSSP), Valuepay Microfinance Bank and MeterToken, building and maintaining web and mobile features for payment, banking and utility products.
- Build and update PSSP frontend features and connect them to backend APIs for business payment collection and transaction workflows.
- Handle roughly half of the MFB mobile app frontend work, including new features, API integration, app state and investigating issues reported during use.
- Take day-to-day ownership of MeterToken's frontend, from planning and building features to fixing bugs, maintaining existing flows and making ongoing improvements.
- Build mobile screens and flows with React Native and web interfaces with React and TypeScript; trace issues through navigation, API responses, application state and payment flows.
- Work with product and engineering teammates to clarify requirements, review changes and test features before release, with a focus on keeping existing flows working.

NITEON, *Frontend Engineer (Project-based)* 07/2024 – 01/2026 | Boulder, Colorado, USA

- Built marketplace and admin-dashboard features for NITEON's B2B platform connecting African businesses with international markets, turning product requirements into usable web experiences.
- Worked across web and mobile product areas using Next.js, React Native and Flutter, adapting the implementation to the needs of each interface.
- Contributed to frontend changes linked to a reported 20% improvement in page-load speed and SEO effectiveness; keep this figure only if you can explain how it was measured.
- Worked on dashboard usability, rendering approaches and Firebase integrations to support the platform's core user workflows.

Codemanic Software Solutions, *Software Engineer (Frontend-focused, Project-based)* 08/2023 – 12/2025 | Lagos, Nigeria

- Built and maintained React applications and reusable components across products, keeping shared UI patterns consistent and easier to update.
- Developed frontend features for digital tools supporting RCCG operations across multiple locations.

- Refactored frontend code to make it easier to maintain and worked with designers to translate designs into consistent interfaces.
- Used testing and code reviews to help catch issues earlier; the work was associated with a reported 25% reduction in frontend bugs. Be ready to explain the baseline and how this was tracked.

SOS Creativity, *Software Engineer (Part-time)* 07/2024 – 12/2024 | Manchester, United Kingdom

- Built and maintained React and Next.js features for dashboards and onboarding, focusing on responsive layouts and clear user flows.
- Integrated authentication, forms and APIs, and investigated production issues affecting important parts of the user journey.

Africart Store Enterprise ↗, *Software Engineer — Frontend & Mobile (Full-time)* 02/2024 – 12/2024 | Lagos, Nigeria

- Built features for Afribooking's guest and owner mobile apps and admin dashboard for an apartment-booking platform.
- Implemented key booking flows, including reservation requests, guest–owner price discussions and chat.
- Connected the apps to Laravel APIs, managed shared UI state with Context API and reused components to keep screens
- consistent.

Navigating with Neol (NGO), *Full Stack Developer (Volunteer)* 09/2023 – 12/2024 | Lagos, Nigeria

- Built and maintained full-stack features for digital tools used in the NGO's outreach and resource-distribution work.
- Worked on MongoDB queries and Node.js APIs as part of site-performance improvements reported at 15%; retain the figure only if you can explain the measurement.

Glumia Solutions, *Software Developer (Intern)* 03/2024 – 09/2024 | Lagos, Nigeria

- Built and maintained REST API endpoints and backend logic with Node.js, Express.js and NestJS, including CRUD operations and business rules.
- Worked with PostgreSQL and MongoDB, writing queries and handling schema changes, migrations and TypeORM-based data access.
- Documented and checked APIs with Swagger and Postman, supported AWS deployments and worked with frontend developers on integration.

Ration Technologies, *Mobile Engineer (Part-time)* Lagos, Nigeria

- Built and maintained features for Ration's customer and vendor mobile apps, supporting the different tasks each user type needs to complete.
- Connected screens to backend APIs and managed app state and navigation so data and user flows worked together across both apps.
- Investigated and fixed issues in key workflows, tested changes and helped keep both apps stable as features evolved.

All Talentz, *IT Engineer & Mobile Engineer (Part-time)* Ohio, USA

- Worked on mobile development and ongoing support for GET ATRA, Savewyze and Restore Capital across property restoration, personal finance and investment use cases.
- Contributed to GET ATRA workflows for documenting property damage and insurance claims, as well as Savewyze features for savings, wallet transfers, gift cards and utility payments.
- Supported Restore Capital and helped maintain app functionality by investigating issues and contributing to product updates.
- Handled IT support alongside mobile engineering, troubleshooting technical issues and helping keep day-to-day systems and apps usable.

Seedbuilders, *Software Developer Trainee* 07/2022 – 12/2022 | Abuja, Nigeria

- Completed practical, project-based training, building CRUD applications and contributing to internal products and startup MVPs while learning JavaScript, React, Node.js and PostgreSQL.

SELECTED PRODUCTS

Savewyze ↗, *Savings, wallet transfers, gift cards and utility payments.*

Restore Capital ↗, *Investment product*

GET ATRA ↗, *Property damage and insurance claim workflows.*

MeterToken ↗, *Utility payment product*
